

STRETCHING IMPROVES THE QUALITY OF YOUR SLEEP

Stretching is a form of physical exercise that improves muscle elasticity and increases muscle control, flexibility, and range of motion. Stretching is also beneficial for your mind and many people practice it to reduce stress and rebalance their mind as well as their body. These are the reasons that inspired Magniflex to reinterpret this activity and adapt it to the world of sleep and relaxation in order to improve people's wellbeing.

SLEEP IS LIFE'S GREATEST PLEASURE.

HOW IT WORKS

The inclined sections in the mattress core generate a stretching movement as a response to body weight.

This movement increases the space between the vertebrae and revitalizes your discs during sleep.
